Disk shredding and decommissioning

When buying new devices, what do you do with the old ones? Our End-of-life services look at taking care of the onerous task of storing and securely disposing of all your old equipment. If logistics and storage is an issue, we offer flexible options for warehousing and shipping of all your old equipment to make the burden a little easier.

Our process:

Shipping and Logistics

Old devices can often sit in a cupboard or in a box in a room for an extended period. We understand getting rid of these devices can be an issue of logistics and time spent. Let us take the brunt of getting these devices out of your hands, we can organise packing and shipment back to our warehouse to process any devices that require decommissioning.

Storage and warehousing

Is space an issue for you in your office or building? Truis has warehousing facilities suited to store and begin processing your aging hardware. Our state-of-the-art facility can house any type of hardware from large storage units to racks and servers.

Asset tracking and documentation

After we receive your hardware we audit and record all the assets into a detailed report for you. This helps you keep track of your assets so that you can advise as on what you want to dispose of or keep.

Secure wipe or device destruction

If the devices have seen their day, we can destroy any hard drives and e-waste them while also decommissioning the rest of the hardware for recycling. To comply with security policies and procedures we offer a certificate of destruction and video recording of any disks destroyed.

Disk Shredding Services
